

Disk Anchor

GENERAL DESCRIPTION

The Garden Roof Disk Anchor is composed of a recycled polyethylene base disk and top disk.

BASIC USE

Disk Anchor is designed to safely and effectively secure GardMat[®] erosion control blankets and Sedum Carpet and Tile over LiteTop[®] growing media in a Hydrotech Garden Roof[®] Assembly.

TECHNICAL DATA

Thicknesses : Base disk: 4.7 mm (3/16 in.); Shaft: Diam. 9.5 mm (3/8 in.); Top disk: 0.7 mm (0.03 in.)

Length/Width : Base disk: Diam. 127 mm (5 in.); Shaft: 300 mm (12 in.); Top disk: Diam. 121 mm (4.75 in.)

INSTALLATION

- The Base Disk/Shaft is to be placed at the specified spacing after the LiteTop[®] growing media has been placed.
- The Base Disk should be “wiggled” through the growing media to displace the media and allow the Base Disk to sit directly on the LiteTop[®] filter previously installed over the Gardendrain[®] element. After placement, the displaced growing media should be pushed back around the Base Disk/Shaft.
- GardMat[®] erosion blanket or sedum carpet or tile is then installed and pierced by the Disk Anchor Shaft.
- Top Disks are then pushed down over the Shafts until flush with the GardMat[®] erosion blanket or sedum carpet or tile.
- Any remaining Shaft should be trimmed/cut down to 19 mm (3/4 in.) above the Top Disk.
